

ProQuest TDM Studio

A Text and Data Mining Solution for **Research, Teaching and Learning**

Analyze. Connect. Discover.

TDM Studio puts the power of text and data mining directly in the researcher's hands. From an initial idea to the final output, this solution from ProQuest gives students, faculty and researchers access to text and data mining tools to help make new connections and uncover career defining research outcomes.

- **Analyze:** Access and analyze sought-after content for text and data mining with the flexibility of data analysis methods provided by ProQuest or using your preferred methods with open source programming languages R and Python.
- **Connect:** Uncover relationships, patterns, and connections within and between datasets from a variety of sources. Collaborate in real time with your colleagues on text and data mining projects, improving productivity for your entire team.
- **Discover:** Gain new insights and challenge previous findings with new discoveries through text and data mining. Keep your university at the forefront of data analytics with a solution designed for not only research, but also teaching and learning.

Sought-After Content

A collection of ProQuest rights-cleared content across disciplines and format types and the ability to upload your own datasets.

Flexibility

Utilize data analysis methods provided by ProQuest or your preferred methods using open-source programmatic languages like R and Python.

Efficiency & Collaboration

Shorten the time to create datasets, provide consistent data schemas, and collaborate in real time with colleagues on a single platform.

Research, Teaching & Learning

Enhance research, teaching and learning outcomes across campus with a solution designed for varied skill levels in research methodologies and approaches.

Critical Content for Text and Data Mining

ProQuest Content

Leverage the value of collections from science, technology, and medicine to public policy, history and literature.

- Subscription and perpetually licensed content on the ProQuest Platform
- Rights-cleared content across disciplines and formats
- Consistent data schema across all content types
- Content types include:
 - Current and historical newspapers
 - Dissertations and theses
 - Scholarly journals
 - Primary Sources

Upload Your Content

Connect your datasets with ProQuest content, providing a truly comprehensive approach to data analysis.

- Easily incorporate open access content such as institutional repositories or journal articles
- Make use of additional content such as social media content and blogs
- Upload your own datasets or content for which you have obtained the rights to text and data mine

“TDM Studio offers clear value for researchers, not only making text and data mining activities more efficient but also ensuring adherence to relevant licensing terms.”

– Kate Worlock, Vice President and Lead Analyst, Outsell

ProQuest TDM Studio Benefits

Libraries:

- Add value to an institution’s research workflow and output by providing a solution that increases efficiency and productivity
- Showcase and leverage the value of content in existing collections
- Create opportunities to partner with research teams and facilitate collaboration across disciplines to increase research effectiveness

Faculty and Students:

- Enhance research, teaching and learning outcomes across campus
- Designed for use with different skill levels in research methodologies and approaches.
- Teach standard methodologies and develop valuable research and data analysis skills
